

Solving Inequalities with the Distributive Property

Worksheet 7A.01.09

Name _____

Date _____

Period _____

For questions 1 through 4, use the inequality $-30 \geq -6(8 - x)$.

1. Solve it by using the distributive property first.

2. Solve it again by eliminating the -6 first.

3. Graph the solution on the number line.

4. Verify your solution set by substitution. Test one value inside it and one value outside it.

5. Which graph represents the solution to $-(a + 4) > -7$?

A.

B.

C.

D.

For questions 6 through 9, solve using whichever method you prefer, then graph the solution set.

6. $9 > 3(5c - 7)$

7. $\frac{1}{3}(6 - m) \geq -4$

8. $-0.9(x + 2.5) < -2.25$

9. $(5/3)(11 - x/8) \geq 20$

10. A classmate was absent today. Describe, in words, two different ways to solve $2(-7 + d) \leq -16$. Then give the solution.
