

Rational and Irrational Numbers on the Number Line*Additional Practice 7A.02.05*

Name _____

Date _____

Period _____

1. Sort the seven numbers into the table. Two of them carry a radical sign and are still rational.

$$0.4 \quad -\sqrt{20} \quad -6 \quad -\sqrt{36} \quad -\frac{2}{3}\pi \quad \sqrt[3]{-27} \quad -\frac{11}{3}$$

Rational	Irrational

For questions 2 through 7, compare each pair using $<$, $>$ or $=$.

2.	$\sqrt[3]{-56}$		$-3\frac{3}{4}$
3.	$\frac{\pi}{2} - 3$		$-3 + \frac{1}{2}\pi$
4.	$\sqrt{20}$		$4.\overline{23}$
5.	$-\sqrt[3]{125}$		$-\sqrt{100}$
6.	$\frac{123}{15}$		8.25
7.	$4\sqrt{35}$		23.12122...

8. Order the numbers from least to greatest, then plot and label each one.

$$-\sqrt{15} \quad -\frac{2}{3}\pi \quad -0.\overline{09} \quad \frac{65}{16} \quad \sqrt{45}$$

9. Order the numbers from least to greatest, then plot and label each one.

$$-\frac{98}{11} \quad \pi^2 - 9 \quad -\sqrt[3]{-88} \quad 6\frac{1}{2} \quad \sqrt{63}$$

10. Which is greater, $-\sqrt{36}$ or $-\frac{2}{3}\pi$? Explain how you decided, and say what a student who answers the other way is doing wrong.
