

Applying Exponent Laws*Independent Set 3.05* **ANSWER KEY***Six questions, on your own, in silence. Show the step that does the work.*

1. Rewrite with a positive exponent. $\left(\frac{3}{4}\right)^{-2}$

$$\left(\frac{4}{3}\right)^2$$

2. Find the value. $\left(\frac{6}{7}\right)^{-2}$

$$\frac{49}{36}$$

Flip, then square.

3. Rewrite with a positive exponent. $\left(-\frac{5}{6}\right)^{-3}$

$$\left(-\frac{6}{5}\right)^3$$

The base keeps its sign through the flip.

4. Find the value. $\left(\frac{1}{2}\right)^{-4}$

$$16$$

 $(2/1)^4$.

5. Find the value. $\left(\frac{3}{2}\right)^{-1} \cdot \left(\frac{3}{2}\right)^3$

$$\left(\frac{3}{2}\right)^2 = \frac{9}{4}$$

 $-1 + 3 = 2$.

6. Find the value of n . $\left(\frac{4}{7}\right)^n = \left(\frac{7}{4}\right)^3$

$$n = -3$$

Flipping the base flips the exponent's sign.
