GRADE 7 ACCELERATED · UNIT 5 · PRACTICE TEST

Multi-Step Proportional Relationships

24 points **ANSWER KEY**

Name
Date
Period

Show your work. One point for each lettered part.

Part 1. Scale Drawings and Scale Factors

10 points MA.7.GR.1.5

If an earlier part is wrong, a later part still earns its point when the right operation is applied to your own earlier answer — but only if that work is on the page.

1. A 4 cm side of a figure is 12 cm in its scale copy. Find the scale factor. *1 pt*

k = 3

copy ÷ original

Scoring: 1 point.

2. A 12 cm side of a figure is 6 cm in its scale copy. Find the scale factor. *1 pt*

k = 0.5

copy ÷ original; the copy is smaller, so k is under 1 — 2.5, 4 and 2 are the proportion backwards

Scoring: 1 point.

3. A drawing has a 25° angle. A scale copy is made at k = 4. What is the matching angle in the copy? *1 pt*

- ○ A. 100°
- ○ B. 6.25°
- ○ C. 29°
- ● **D. 25°**

D

Lengths scale; angles do not.

Scoring: 1 point.

4. A 3 cm by 5 cm rectangle is scaled by k = 2.

a. Find the copy's perimeter. *1 pt*

32 cm

perimeter × k

b. Find the copy's area. *1 pt*

60 cm²

area × k² — 36, 40 and 30 multiplied the area by k once

Scoring: a 1 · b 1 = 2 points.

5. A figure has area 6 cm². Its scale copy has area 150 cm². Find k, and explain why k is not 25. *1 pt*

k = 5. The area ratio is k², because area is two lengths each multiplied by k; 25 is k², so k is its square root.

The point needs k AND the reason (two lengths, so the ratio is k²). 'k = 3' alone is half the item; 'because you square root it' with no reason why is the rule without the reason.

Scoring: 1 point.

6. A floor plan is drawn at 1 in : 5 ft. A room is 2 in by 3 in on the plan.

a. Find the real length of the wall drawn 2 in long. *1 pt*

10 ft

the scale per 1 inch, then × — 1 in : 4 ft, 1 in : 2 ft, 1 in : 5 ft

b. Find the room's real area. *1 pt*

150 ft²

real dimensions first: 8 by 14, 6 by 10, 10 by 15 — the drawing's area × the rate once is the named error

Scoring: a 1 · b 1 = 2 points.

7. A plan is drawn at 1 in : 3 ft. A real wall is 15 ft long. How long is it on the plan? *1 pt*

5 in

real ÷ rate

Scoring: 1 point.

8. A plan is drawn at 1 in : 6 ft. A room is 1.5 in by 2.5 in on the plan. Find the room's real area. *1 pt*

135 ft²

9 ft by 15 ft.

Scoring: 1 point.

Part 2. Converting Across Systems

8 points *MA.7.AR.3.3*

If an earlier part is wrong, a later part still earns its point when the right operation is applied to your own earlier answer — but only if that work is on the page.

9. 1 in = 2.54 cm. How many centimetres is 7 in? *1 pt*

17.78 cm

× the ratio whose 1 is inches

Scoring: 1 point.

10. 1 cm = 0.39 in. How many inches is 110 cm? *1 pt*

42.9 in (43.3 by ÷ 2.54)

× 0.39; the sheet's other ratio, ÷ 2.54, earns the point too when the work shows it. × 2.54 (177.8, 228.6, 279.4) is the inverted ratio.

Scoring: 1 point.

11. 1 yd = 3 ft, 1 ft = 12 in, 1 in = 2.54 cm. How many centimetres is 1.5 yd? *1 pt*

137.16 cm

a chain: 144 in, 180 in, 54 in, then × 2.54. The estimate (a yard is nearly a metre) catches 10.16, 12.7 and 3.81.

Scoring: 1 point.

12. 1 kg = 2.204 lb. How many pounds is 35 kg? *1 pt*

77.14 lb

× the ratio whose 1 is the unit you have; the estimate says more pounds than kilograms

Scoring: 1 point.

13. 1 gal = 3.785 L. How many litres is 3 gal? *1 pt*

11.355 L

more litres than gallons

Scoring: 1 point.

14. 1 m = 100 cm. A floor is 5 m^2 in area. How many square centimetres is that? *1 pt*

- ○ A. 500 cm^2
- ● **B. 50,000 cm^2**
- ○ C. 10,000 cm^2
- ○ D. 1,000 cm^2

B

Scoring: 1 point.

15. Rate on 5 Nov: 1 US dollar = 1.32 Canadian dollars.

a. How many Canadian dollars is $90? *1 pt*

118.80 Canadian dollars

× the rate

b. How many US dollars is 66 Canadian dollars? *1 pt*

$50

÷ the rate; 21.16, 72.90 and 87.12 multiplied both ways

Scoring: a 1 · b 1 = 2 points.

Part 3. Multi-Step Proportion Problems

6 points MA.7.AR.4.5

If an earlier part is wrong, a later part still earns its point when the right operation is applied to your own earlier answer — but only if that work is on the page.

16. A car does 27 miles per gallon and its tank holds 10 gal.

a. How far does it go on a full tank? *1 pt*

270 mi

the rate × the gallons

b. It starts a 1,200-mi trip with a full tank. How many tanks of gas does the trip take? *1 pt*

5 tanks (1,200 ÷ 270 ≈ 4.44)

the part of a tank is still a tank; follow-through on part (a)

Scoring: a 1 · b 1 = 2 points.

17. A recipe for 5 servings uses 2 cups of rice.

a. How much rice for 15 servings? *1 pt*

6 cups

k from the yields (2.5, 1.5, 3), then the ingredient

b. With 10 cups on hand, how many servings can be made? *1 pt*

25 servings

recipes the pantry makes (4, 4, 5) × the yield; 15, 24 and 25 scaled the yield by the cups

Scoring: a 1 · b 1 = 2 points.

18. Paint is mixed 3 : 1 : 2. A batch uses 4 gal of the second colour. How many gallons is the whole batch? *1 pt*

24 gal

k from the part you know (3, 4, 4), then the whole (9, 8, 6 parts); 12, 16 and 8 found one other part and stopped

Scoring: 1 point.

19. 1 mi = 1.61 km. A train does 80 km/h; a bus does 45 mi/h. Which is faster? Show both speeds in one unit. *1 pt*

The train: 45 mi/h = 72.45 km/h, and 80 > 72.45.

Same unit first; 80 > 45 compared two units.

Scoring: 1 point.

Score Tracker

Benchmark	Questions	Possible	Earned
MA.7.GR.1.5	1, 2, 3, 4, 5, 6, 7, 8	10	
MA.7.AR.3.3	9, 10, 11, 12, 13, 14, 15	8	
MA.7.AR.4.5	16, 17, 18, 19	6	
Total		**24**	

If an earlier part is wrong, a later part still earns its point when the right operation is applied to your own earlier answer — but only if that work is on the page. Nothing is weighed and nothing is arguable: apply the part's operation to the student's own earlier value and tick if that is what is written.
