GRADE 7 ACCELERATED · UNIT 6 · LESSON 5

Distance on the Coordinate Plane

Independent Set 6.05 **ANSWER KEY**

Name
Date
Period

Six questions, on your own, in silence. Show the step that does the work.

1. Find the distance between $(-6, 3)$ and $(7, 3)$.

13 units

Same y: 7 − (−6) = 13.

2. Find the distance between $(5, -7)$ and $(5, 4)$.

11 units

Same x: 4 − (−7) = 11.

3. Find the distance between $(-7, 1)$ and $(5, -4)$.

13 units

Across 12, down 5; 144 + 25 = 169.

4. Find the distance between $(-2, 5)$ and $(1, -2)$, to the nearest tenth.

$\sqrt{58} \approx 7.6$ units

Across 3, down 7; 9 + 49 = 58.

5. How far is $(-4, 9)$ from the origin, to the nearest tenth?

$\sqrt{97} \approx 9.8$ units

Legs 4 and 9; 16 + 81 = 97.

6. On a map in kilometers, a pool is at $(-2, -3)$ and a park at $(8, 8)$. How far apart are they in a straight line, to the nearest tenth of a kilometer?

$\sqrt{221} \approx 14.9$ km

Across 10, up 11; 100 + 121 = 221.
