GRADE 7 ACCELERATED · UNIT 5 · LESSONS 10–11

Multi-Step Proportion Problems

MA.7.AR.4.5

I can solve a problem that takes two or more proportional steps, including a unit conversion, and compare two rates given in different units.

Warm-Up

1. 1 kg = 2.204 lb. How many pounds is 4 kg?
2. At 1 cm : 50 km, 3 cm on the map is how many km?
3. Find the value: $3 \times 2.5 + 1.5$
4. A car goes 180 miles in 3 hours. Its speed in miles per hour?

Warm-Up

1. 1 kg = 2.204 lb. How many pounds is 4 kg? **8.816 lb**
2. At 1 cm : 50 km, 3 cm on the map is how many km? **150 km**
3. Find the value: $3 \times 2.5 + 1.5$ **9**
4. A car goes 180 miles in 3 hours. Its speed in miles per hour?

   60 miles per hour

Vocabulary

unit rate

how much of one quantity per 1 of the other — 23 miles per 1 gallon

proportional

two quantities whose ratio stays the same: double one, the other doubles

per

for each 1 — the word that marks a unit rate

Notes

I. One unit rate, used twice

$23 \times 17.5 = 402.5$ mi per tank $1{,}207 \div 402.5 \approx 3$ tanks

Notes

II. Compare rates in one unit

$$100 \text{ km/h} \times 0.62 = 62 \text{ mi/h} \qquad 62 < 65$$

Same unit first. Then compare.

Notes

III. Scale a recipe, then check the pantry

$$k = \frac{30}{12} = 2.5 \qquad 2.5 \times 1\frac{1}{2} = 3\frac{3}{4} \text{ cups} > 3$$

Paint $1:2:3$, 4 gal of the first: $k = 4$, $6 \text{ parts} \times 4 = 24$ gal

Example 1

1 mi = 1.61 km. Runner A does 5 mi in 40 min; runner B does 9 km in 45 min.

Find each speed in km/h. Who is faster?

Example 1

$5 \times 1.61 = 8.05$ km 40 min $= \frac{2}{3}$ h

$8.05 \div \frac{2}{3} = 12.075$

$9 \div \frac{3}{4} = 12$

$12.075 > 12$

Answer: A ≈ 12.08 km/h, B = 12 km/h: A

Your Turn

1 mi = 1.61 km. Runner A does 4 mi in 30 min; runner B does 7 km in 35 min.

Find each speed in km/h. Who is faster?

Your Turn

1 mi = 1.61 km. Runner A does 4 mi in 30 min; runner B does 7 km in 35 min.

Find each speed in km/h. Who is faster?

$$4 \times 1.61 = 6.44 \qquad 6.44 \div \frac{1}{2} = 12.88$$

$$7 \div \frac{7}{12} = 12$$

Answer: A = 12.88 km/h, B = 12 km/h: A

Example 2

A recipe for 8 servings uses 2½ cups of rice.

How much rice for 20 servings? With 5 cups on hand, how many servings can be made?

Example 2

$$k = \frac{20}{8} = 2.5 \qquad 2.5 \times 2\frac{1}{2} = 6\frac{1}{4}$$

$$5 \div 2\frac{1}{2} = 2 \qquad 2 \times 8 = 16$$

Answer: 6¼ cups; 16 servings

Your Turn

A recipe for 6 servings uses 1½ cups of rice.

How much rice for 12 servings? With 4½ cups on hand, how many servings?

Your Turn

A recipe for 6 servings uses 1½ cups of rice.

How much rice for 12 servings? With 4½ cups on hand, how many servings?

$$k = \frac{12}{6} = 2 \qquad 2 \times 1\frac{1}{2} = 3$$

$$4\frac{1}{2} \div 1\frac{1}{2} = 3 \qquad 3 \times 6 = 18$$

Answer: 3 cups; 18 servings

Whiteboards · Question 1 of 9

A car gets 28 miles per gallon. Its tank holds 15 gal.

How far does it go on a full tank?

Answer it.

Whiteboards · Question 1 of 9

A car gets 28 miles per gallon. Its tank holds 15 gal.

How far does it go on a full tank?

$$28 \times 15 = 420$$

Answer: 420 mi

Whiteboards · Question 2 of 9

A printer prints 35 pages per minute. A job is 1,400 pages.

How long does the job take?

Answer it.

Whiteboards · Question 2 of 9

A printer prints 35 pages per minute. A job is 1,400 pages.

How long does the job take?

$$1{,}400 \div 35 = 40$$

Answer: 40 min

Whiteboards · Question 3 of 9

Mia earns $14.50 per hour at a shop 2 mi from home, 6 h a day for 5 days.

How much does she earn?

Answer it.

Whiteboards · Question 3 of 9

Mia earns $14.50 per hour at a shop 2 mi from home, 6 h a day for 5 days.

How much does she earn?

$$6 \times 5 = 30 \qquad 30 \times 14.50 = 435$$

Answer: $435

Whiteboards · Question 4 of 9

A car gets 30 miles per gallon with a 12-gal tank. It makes a 900-mi trip.

How many tanks of gas does the trip use? (Part of a tank counts as a whole tank.)

A. 2

B. 75

C. 25

D. 3

Answer it.

Whiteboards · Question 4 of 9

A car gets 30 miles per gallon with a 12-gal tank. It makes a 900-mi trip.

How many tanks of gas does the trip use? (Part of a tank counts as a whole tank.)

$$30 \times 12 = 360 \text{ mi per tank}$$

$$900 \div 360 = 2.5 \rightarrow 3 \text{ tanks}$$

Answer: D — 3 tanks

Whiteboards · Question 5 of 9

A cereal has 12 g of protein per 100 g.

How many grams of protein in 1 kg?

Answer it.

Whiteboards · Question 5 of 9

A cereal has 12 g of protein per 100 g.

How many grams of protein in 1 kg?

$$1{,}000 \div 100 = 10 \qquad 10 \times 12 = 120$$

Answer: 120 g

Whiteboards · Question 6 of 9

1 mi = 1.61 km. Cyclist A rides 12 km in 50 min; cyclist B rides 7 mi in 45 min.

Who is faster?

A. Tie: 12 and 12

B. A: 12 > 7

C. B: 15.0 > 14.4

D. A: 14.4 > 11.27

Answer it.

Whiteboards · Question 6 of 9

1 mi = 1.61 km. Cyclist A rides 12 km in 50 min; cyclist B rides 7 mi in 45 min.

Who is faster?

$$\text{A}: 50 \text{ min} = \frac{5}{6} \text{ h} \qquad 12 \div \frac{5}{6} = 14.4 \text{ km/h}$$

$$\text{B}: 7 \times 1.61 = 11.27 \text{ km} \qquad 11.27 \div \frac{3}{4} \approx 15.03 \text{ km/h}$$

Answer: C — cyclist B

Whiteboards · Question 7 of 9

Paint is mixed white : blue : grey = 2 : 4 : 5. A batch uses 8 gal of white.

How many gallons is the whole batch?

Answer it.

Whiteboards · Question 7 of 9

Paint is mixed white : blue : grey = 2 : 4 : 5. A batch uses 8 gal of white.

How many gallons is the whole batch?

$$k = \frac{8}{2} = 4 \qquad 2 + 4 + 5 = 11 \text{ parts}$$

$$11 \times 4 = 44$$

Answer: 44 gal

Whiteboards · Question 8 of 9

A plan is drawn at 1 in : 4 ft; a room is 2 in by 2.5 in on it. 1 ft = 0.305 m.

Find the room's area in square meters.

Answer it.

Whiteboards · Question 8 of 9

A plan is drawn at 1 in : 4 ft; a room is 2 in by 2.5 in on it. 1 ft = 0.305 m.

Find the room's area in square meters.

$2 \times 4 = 8$ ft $2.5 \times 4 = 10$ ft

$8 \times 0.305 = 2.44$ $10 \times 0.305 = 3.05$ $2.44 \times 3.05 = 7.442$

Answer: About 7.44 m²

Whiteboards · Question 9 of 9

1 mi = 1.61 km. A 300-km drive. Car A averages 50 mi/h; car B averages 75 km/h.

Which car gets there first, and by how long? Explain.

Write your answer in sentences.

Whiteboards · Question 9 of 9

1 mi = 1.61 km. A 300-km drive. Car A averages 50 mi/h; car B averages 75 km/h.

Which car gets there first, and by how long? Explain.

$$50 \times 1.61 = 80.5 \text{ km/h}$$

$$300 \div 80.5 \approx 3.73 \text{ h} \qquad 300 \div 75 = 4 \text{ h}$$

Answer: Car A: 80.5 km/h against 75, so about 3.73 h against 4 h — about 16 minutes sooner.

Independent Set

1. A car gets 32 miles per gallon and its tank holds 14 gal. How far does it go on a tank?

2. That car makes a 1,000-mi trip. How many tanks of gas does it use? (Part of a tank counts as a whole tank.)

3. A recipe for 4 servings uses 1¼ cups of rice. How much rice for 10 servings?

4. 1 km = 0.62 mi. A train does 120 km/h; a bus does 70 mi/h. Which is faster? Show the speeds in one unit.

5. Juice is mixed orange : mango : water = 3 : 2 : 5. A batch uses 9 cups of orange. How many cups is the whole batch?

6. A plan is drawn at 1 in : 6 ft; a room is 2 in by 3.5 in on it. Find the room's real area.
