

Square Values*Additional Practice 7A.02.01*

1. Complete the table. Each area is the side length multiplied by itself.

Side s	6	7	8	9	10	11	12	13	14	15
Area s^2										

2. Select ALL of the numbers below that are perfect squares.

☐ 4☐ 12☐ 25☐ 32☐ 50☐ 81☐ 90☐ 121☐ 150☐ 169

For questions 3 through 5, find the area of a square with the side length given.

3. Side length 15 units

4. Side length $\frac{3}{4}$ meters

5. Side length 1.2 units

For questions 6 through 8, find the length of one side of a square with the area given.

6. Area 169 square inches

7. Area $\frac{9}{16}$ square meters

8. Area 0.64 square units

Questions 9 and 10 use the equation $y = x^2$.

9. Complete the table of values. Then plot the points on the grid.

x	Substitute into $y = x^2$	Coordinates (x, y)
-3		
-2		
-1		
0		
1		
2		
3		

10. A classmate says the graph of $y = x^2$ is always above the x-axis. Is the classmate right? Explain.

- 11.** Can a square have an area of 20 square units? If it can, name the two whole numbers its side length falls between. Explain how you know.
